

Scorpion^{EV} Charges into the EV World!

2022 SEMA SHOW: BOOTH #20025

PRESS RELEASE: Temecula, CA • October 10, 2022

Nestled in the Southern California Wine Country and founded in 2021, Scorpion EV has been quietly building the most powerful Cobra tribute cars to hit the market. The brainchild of electrical engineer and noted electronics expert Dr. Bill Cardoso, the company will launch its head turning Scorpion 600 in June 2022 and unveiled its fire breathing Scorpion 1000 at the 2022 SEMA Show.

Inspired by the legendary Shelby Cobras of the mid-1960's, Scorpion EV (S-EV) provides customers a

seamless and unique experience of driving a classic car, coupled with the exhilarating performance of a state-of-the-art electric vehicle. The overarching vision is to deliver a high-quality finished product to customers with the shortest lead time possible. This vision serves as a daily compass for the company. The Scorpion EV is an experience for all your senses—from the quiet purr of the electric motor to the smell of rubber as the miles disappear in front of you.

Scorpion 600: Central Hall Booth #20025

Launched in June 2022, the Scorpion 600 is an exceptionally fast sports car that also delivers long range (400+ mile). At just 2,660 lbs. and featuring the power of a Tesla Model S, the Scorpion 600 delivers 600hp and rips the 0-60 in a mere 2.4 seconds. With driving controls tastefully incorporated into the classic mahogany wood steering wheel, performance aspects of the motor are controllable through a specially designed Phone App which allows the driver to dial in the amount of horsepower and regen available at the wheels. Scorpion 600 color choices are limitless, with several trim options available: including side pipes as a styling cue or choose a nostalgic nod with a classic gearshift or proper Smith's gauges.

PRESS CONFERENCE & UNVEILING

Join CEO Bill Cardoso as the Scorpion EV Team reveals the powerful Scorpion 1000 to the public!
SEMA ELECTRIFIED Area | Tuesday, November 1, 2022 • 1:00 PM

This "all-business" competition level sports car delivers a ground-gripping 1,000hp in a limited production 2,700lb vehicle. Designed with extreme performance in mind, this all-wheel drive powerhouse, sports a full aerodynamic package and incorporates the most powerful electric powertrain available on the market today. The Scorpion 1000 is delivered with carbon fiber seats and full race harnesses for both the driver and passenger. This street-legal EV delivers warp speed acceleration expertly wrapped in the nostalgia of a classic sports car. Emotion in motion when doing laps around the track or getting coffee in a beautiful Sunday morning.
